## (54) EXHAUST EMISSION CONTROL DEVICE FOR DIESEL ENGINE

(57)Abstract:

PURPOSE: To dissolve and discharge aldehyde, hydrocarbons and organic carboxylic acids in a relatively short time even after cold start without disassembling of an exhaust emission control device.  
CONSTITUTION: An adsorption jacket 4 filled with a metallic pellet 7 is provided upstream; and an adsorption jacket 5 containing a catalyst 9 carrying active substance therein is disposed downstream. The metallic pellet 7 adsorbs hydrocarbons, aldehyde and an organic carboxylic acid at the time of cold start. If a temperature exceeds about 300°C, the HC group or the like is desorbed and dissolved by the catalyst 9.
